Encryption with binary

Although it is not very secret, binary numbers are a code. (Why do you think they call it 'coding'?). To give you practice encoding and decoding a message, use this Unicode chart for the upper case letters as a cipher strip. For example, the word "HELLO" can be coded as:

10010001000101100110010011001001111

Decoding:

Each letter above uses seven digits. Circle the digits for each letter, look up the number in the chart, and write the letter beneath the number.

Encoding:

Write a word here that is at least 5 and no more than 8 characters

- Using the table, write out the word on a separate piece of paper.
- Have your partner check that you correctly encoded your work.
- Give your paper to another member of your class.
 Challenge them to decode it.
